

Remote and Hybrid Teaching & Learning Spaces

BUILT FOR EDUCATION

A NEW STUDENT EXPERIENCE TO DRIVE LEARNING OUTCOMES

Before Covid-19, students had a shared experience of coming to campus, regardless of their course or personal circumstances.

In the business world, many good knowledge-based jobs can be done successfully, if not better, from home, with surveys and research now predicting that continuing to work from home, even if not full time, will continue indefinitely.

In the world of education, there is now a realisation that being on campus full-time is not the most effective way for many students, and we are now moving into a new normal where students will expect their teaching to be simultaneously provided in fully flexible ways either on-campus or when based remotely; hybrid learning will become just learning for HE and FE students.

If YOUR students would benefit from a shared *being there* immersive experience when learning remotely, with a system built specifically for education, then please turn over.....

THE VIRTUAL CLASSROOM

powered by: 

Although clearly a digital technology solution, this **Teaching Wall** has been specifically designed to support the educational requirements of both teachers and their students.

Not only do new generations of students expect to use connecting technology for their studies, they now assume that real-time technology will provide them with a 'being there' experience where they can be a fully active member of their class, and sit amongst their peers even when being on campus is not possible.

Supporting a pedagogy-first approach, this **Teaching Wall** was specifically designed from the ground up based on years of providing educators with video solutions, and following consultations with teachers and students.

Teaching WALL is powered by Vscene; the video collaboration platform hosted on the Jisc high speed Janet network in the UK.

A FULLY-SCALABLE PART OF YOUR DIGITAL-FIRST STRATEGY

As institutions move into the next phase of providing remote learning experiences that are far superior and engaging for students than the 'just getting by in an emergency' experiences that so many students have complained about, developments such as this **Teaching Wall** will lead the way.

A Sense of Belonging

The perception of online learning being an isolated experience has been replaced by real-time engagement where the same empathy and interpersonal skills are as important as being physically in a classroom together.

"The ability to engage meaningfully over distance and be an active and full participant of a class is a gamechanger and far superior to logging on alone and watching videos in isolation."

An Immersive Experience

Just connecting is no longer enough!

Remote learning has evolved because the poor experiences of 'just getting by in an emergency' have almost been consigned to the past. Students can see each other and any teaching materials clearly. Teachers have the space and platform not afforded by a laptop webcam to fully engage students with their subject expertise and passion. They can continue to teach as if their students were physically present, and scaffold the advantages of a digital platform as they focus on teaching and not on technology.

To discuss evolving YOUR online teaching to be a differentiator that will attract students and compliment your on-campus learning, contact:

HOW THIS TEACHING WALL EXCELS

Cost

With eight large 65" displays that bring students into the room so you can see their body language and gauge their engagement, with a professional AI-powered PTZ camera that automatically tracks the teacher, and the latest microphone technology that doesn't need clipping to a lapel or hand holding, expect to pay around £30,000¹ for this **Teaching Wall**, fully installed.

"If it's so much better value than other virtual classrooms, then it must be inferior?"

Nothing could be farther from the truth. The **Teaching Wall** is software-based and designed with fresh thinking and innovations that don't require expensive AV distribution hardware.

Specifications:

Here's what we can do. Can other systems offer YOU so much value and student engagement?

- * **High Quality 4K Video @ 60fps**
- * **Near-zero video & audio latency**
- * **Multiple camera inputs for teacher view, class view and whiteboard view**
- * **Join from a browser; no software to install**
- * **Full timetable scheduler**
- * **Assistants and Learning Technologists can schedule classes for teachers**
- * **10 Minute SLA support for any in-call technical problems**
- * **Teaching WALL is powered by Vscene; the video platform hosted on the Jisc high speed Janet network in the UK.**
- * **No storage costs for recordings in UK Datacentres with GDPR and ISO:27001**
- * **Education and Government clients only**
